

GIGI DUNN

OVERVIEW

Founder in Residence at Entrepreneur First, building personalised preventative healthcare through frontier AI and science. Combines life-sciences strategy at L.E.K. with applied AI research at MIT's Lauffenburger Lab. Cambridge (Natural Sciences, Computational Neuroscience, BA) and Imperial College London (AI Innovation and Applications, MSc). Prioritises creative thought enabled by cross-disciplinary thinking for hard problems, informed by an active art practice and wide reading across fields.

SELECT PROFESSIONAL AND RESEARCH EXPERIENCE

Entrepreneur First, Founder in Residence — London, UK

Mar 2026 – Current

- Selected as 1 of 46 from 3,000+ applicants into EF's deep-tech founder residency to explore opportunities for cofounding and building an impactful AI x science venture from first principles
- Building at the intersection of AI and precision medicine, research spanning neuroscience and female health

Clinical Ops & Research (parallel) — London, UK

Jan – Mar 2026

Genie Fertility — Contractor, clinical operations & data science (female health)

- Supported clinical-trial strategy and operations and helped build the proprietary dataset underpinning a pre-seed AI x female-health startup

Prof. Anil Seth, Consciousness Research Project, University of Sussex — Volunteer data scientist

- Developed machine learning data processing pipelines to analyse a unique proprietary dataset to advance research into consciousness and perception in cognitive neuroscience, and how it changes experience

MIT, Bioengineering Department, Assistant Researcher — Cambridge, USA

May – Sept 2025

- Designed and built a novel AI-based bioinformatics pipeline under Prof. Lauffenburger, surfacing new insight into high-dimensional biological data applied directly to an active cancer-research programme
- Leveraged a VAE based model, constraining latent space by biological and economic concepts for improved translation of statistical model to biological representation

Imperial College London, Student Research — London, UK

Sept 2024 – Sept 2025

Healthtech solution (Hospitals)

- Built the backend and research paper for an LLM-powered triage system; engineered a multi-model pipeline (BioClinicalBERT, ClinicalBERT, DeepSeek) with bias-mitigation and interpretability modules, improving reliability and transparency in emergency-department decisions

Personalised Health & Clinical Trials platform for pregnant women

- Built an AI platform leveraging wearable-derived digital biomarkers to deliver personalised insights to pregnant women, continuous data to clinicians between visits, and real-world evidence and synthetic control arms to pharma; developed the full MVP (data anonymisation and synthesis pipeline) and business plan

Climate-Tech model (Emission tracking)

- Designed a novel image-model architecture for satellite-based GHG tracking with 30× performance gains over SOTA; preparing pilot deployment for real-time carbon monitoring and open-source release

L.E.K. Consulting, Life Sciences Associate Consultant — London, UK**Mar 2022 – Aug 2024**

- Promoted twice in two years (Associate, Senior Associate, Associate Consultant)
- Led and managed global research and analysis workstreams (market sizing and forecasting, go-to-market strategy, expert interviews) across 15+ projects spanning therapeutic and diagnostic areas for Big Pharma, Biotech, MedTech and HealthTech clients
- Selected to build L.E.K.'s multi-model global emissions-calculation system for third-party SBTi auditing (Science Based Targets initiative, driving businesses to net zero by 2050)

Peppy Health, Strategy Analyst Intern — London, UK**Jul – Sept 2020**

- Worked cross-functionally at a digital-health startup to optimise user engagement and platform experience; ran market research identifying 50+ prospective clients to drive growth and expansion

Oxford & Cambridge Varsity Trip, Head of Design and Market Strategy — Cambridge, UK**Mar – Dec 2019**

- Initiated and led the rebrand of a multimillion-pound legacy company, driving record attendance (3,000+) and c.£2M in revenue

Imperial College London, Visiting Researcher — London, UK**Sept – Dec 2017**

- Investigated bacterial genomes for a genetic-engineering approach to combat antibiotic resistance; generated and analysed wet-lab datasets and presented original hypotheses at weekly lab meetings

EDUCATION

Imperial College London, AI Applications and Innovation MSc — London, UK**Sept 2024 – Sept 2025**

Distinction (c.81%); thesis on building novel AI-driven bioinformatics pipelines

*Modules: Python, Deep Learning, Quantum AI, Gen AI Mathematics, Machine Learning for Healthcare, AI Ventures and Innovation***University of Cambridge, Natural Sciences BA — Cambridge, UK****Sept 2018 – June 2021**

1st class (c.70%), top 16% of cohort, David Thompson Scholar, BBS prize for computational neuroscience thesis

- Dissertation specialising in neuro-computation (76%, BBI presentation award): applied a Bayesian framework to model cognitive processes and visual perception, exemplified through visual art

*Modules: Physics, Advanced Maths, Cellular Biology, Chemistry, Computational Neuroscience***Cheltenham Ladies' College — Gloucestershire, UK****Sept 2010 – June 2017**

A-levels (top performer of year): Physics (A*), Chemistry (A*), Biology (A*), Maths (A*), Further Maths AS (A)

EXTRACURRICULAR

Hackathons (UK & USA)**Sept 2024 – Current**

- Regular participant in science-focused tech hackathons (e.g. Entrepreneur First AI x Bio, Sundai Hacks)
- Built projects including an AI app detecting early Parkinson's via smartwatch movement and sleep data
- Currently leading a novel "Art Hack" translating tech-hack methods to the artist community, upcoming event culminating in an exhibition with London School of Fashion

Art / Graphic Design (International)**2015 – Current**

- Classically trained in oil painting and life drawing (Paris, Florence, London, Boston)
- Frequent participant in London exhibitions
- Self-taught freelance graphic designer for charities, educational platforms, festivals, and musicians
