EDUCATION

Imperial College London, AI Applications and Innovation MSc - London, U.K. **Sept 2024 - Sept 2025**

Final Performance : Distinction, Thesis in building novel AI-driven bioinformatics pipelines (c.81%, Distinction)

Modules: Python, Deep Learning, Quantum AI, Gen AI Mathematics, Machine Learning for Healthcare, AI Ventures and Innovation

University of Cambridge, Natural Sciences BA - Cambridge, U.K. **Sept 2018 - June 2021**

Final Performance: 1st class, top 16% of cohort, David Thompson Scholar, BBS prize for Bayesian-model based thesis

Modules: Physics, Advanced Maths, Cellular Biology, Chemistry, Computational Neuroscience

- Dissertation specialising in Neuro-Computation, achieving 76% and BBI presentation award; leveraging a Bayesian theory framework to analyse cognitive processes and visual perception exemplified through the form of visual art

Cheltenham Ladies' College - Gloucestershire, U.K. **Sept 2010 - June 2017**

A-levels (top performer of year): Physics (A*), Chemistry (A*), Biology (A*), Maths (A*), Further Maths AS level (A)

SELECT PROFESSIONAL AND RESEARCH EXPERIENCE

Massachusetts Institute of Technology, Bioengineering Department, Assistant Researcher - Cambridge, USA **May – Sept 2025**

- Researched and developed a novel AI-based bioinformatics pipeline under Prof. Lauffenburger, leveraging contemporary practices, to provide the lab with a novel insight into high dimensional biological data; applied directly to cancer research project
- Communicated technical and theoretical insights to lab, collaborated across teams to drive novel insights and project progress

Imperial College London, Student Research - London, U.K. **Sept 2024 – Sept 2025**

Healthtech solution (Hospitals):

- Built backend and associated research paper for LLM-powered triage system; implemented multi-model pipeline (BioClinicalBERT, ClinicalBERT, DeepSeek) with bias mitigation and interpretability modules, improving reliability and transparency in emergency department decisions

Healthtech Platform (Personalised Health and Clinical Trials):

- Developed an AI-driven healthtech platform leveraging digital biomarkers for personalized insights and synthetic control arms in clinical trials; built MVP (focus on data anonymisation and synthesis pipeline) and supporting market strategy

Climate-Tech Model (Emission Tracking):

- Designed and optimized a novel image model architecture for satellite-based GHG emission tracking, initial analysis with 30× performance gains over SOTA; preparing pilot deployment for real-time carbon monitoring and open-source release

L.E.K. Consulting, Life Sciences Associate Consultant - London, U.K. **Mar 2022 - Aug 2024**

- Promoted through Associate (March 2022-23) and Senior Associate (March 2023-24), to Associate Consultant
- Led and managed global research and analysis workstreams including market sizing and forecast, go-to-market strategy, and expert interviews to support client strategic and scientific considerations over 15+ projects across therapeutic and diagnostic areas and geographies, with Big Pharma, Biotech, MedTech, and HealthTech clients
- Selected to build L.E.K.'s multi-model global emission calculation system for third-party auditing for the progression against SBTi goals (Science Based Target initiative, driving businesses to reduce emissions to net zero by 2050)

Peppy Health, Strategy Analyst Intern - London, U.K. **July - Sept 2020**

- Collaborated cross-functionally at a digital health startup to optimize user engagement and platform experience; conducted market research identifying 50+ potential clients to drive growth and expansion

Oxford and Cambridge Varsity Trip, Head of Design and Market Strategy - Cambridge, U.K. **Mar 2019 - Dec 2019**

- Initiated and led rebrand of a multimillion-pound legacy company, driving record attendance (3,000+) and ~£2M in revenue

Imperial College London, Visiting Researcher - London, U.K. **Sept - Dec 2017**

- Investigated bacterial genome as part of research for genetic engineering approach to combat antibiotic resistance
- Generated and analysed wetlab datasets to present hypotheses at weekly lab meetings

---

EXTRACURRICULAR

Hackathons - (U.K. & USA) **Sept 2024 - Current**

- Regular participant in science-focused tech hackathons (e.g., Entrepreneur First AI x Bio, Sundai Hacks)
- Built projects including an AI app detecting early Parkinson's via smartwatch movement and sleep data

Art / Graphic Design **2015 - Current**

- Classically trained in oil painting and life drawing (Paris, Florence, London, Boston, 2018–2025), participant of London exhibitions
- Self-taught freelance graphic designer for events, charities, and educational platforms (e.g., Medical Herstory, Operation Smile, Breast Cancer Awareness, Medical Herstory blog)
