

GIGI DUNN

gigivadunn@gmail.com | London, UK (open to relocation) | [linkedin.com/in/gigi-dunn/](https://www.linkedin.com/in/gigi-dunn/)

OVERVIEW

Working at the intersection of strategy, AI, and life sciences, I combine consulting (L.E.K. Consulting), venture building (Entrepreneurs First), and technical research (MIT, Imperial, Cambridge) to translate complex scientific breakthroughs into real-world solutions. My approach pairs data-driven execution with cross-disciplinary creative thinking, rooted in a STEM foundation and an active art practice, to address non-trivial challenges across health and development.

SELECT PROFESSIONAL EXPERIENCE

Entrepreneurs First, Founder in Residence — London, UK | March – July 2026

- Selected as 1 of 46 from 3,000+ applicants into EF's deep-tech founder residency to originate and build impactful AI x science ventures from first principles, aiming to address non-trivial humanitarian problems
 - Formulated and tested novel venture hypotheses at the intersection of AI, autonomous labs and the rise of personalised medicine, and neuroscience; established strict “kill” criteria to test against experts
- Vetted technology value propositions through deep interviews with 50+ academic KOLs and industry leaders, pitched weekly and developed thesis on feedback towards VC-backed commercial viability

Freelance ML Research, Strategy, and Operations — London, UK | Jan – Mar 2026

- Built data processing and ML pipelines for proprietary neuro datasets related to visual perception and ageing at Prof. Anil Seth's consciousness research (CONSCIOUS lab)
- Supported clinical data strategy and operations for Genie Fertility, an AI female-health company developing novel biomarkers for diagnosis and treatment design from menstrual blood
- Founded and launched “Art Hack” - hackathon structured events translated for the benefits of artists

L.E.K. Consulting, Life Sciences Associate Consultant — London, UK | Mar 2022 – Aug 2024

- Top performing, promoted twice in two years (Associate, Senior Associate, Associate Consultant)
- Led and managed global workstreams across 15+ engagements; cold-started into novel, complex therapeutic modalities to evaluate technology readiness, IP and competitive landscapes, real world impact and go-to-market strategy for Big Pharma and Biotech clients.
- Conducted structured interviews with global academic and clinical KOLs to vet and refine hypotheses, build value propositions, and inform strategic corporate planning

Selected project highlights

- Led workstreams across markets in Africa, Asia, and South America to strategise for a vaccine launch; interviewed regulators, ministry of health and procurement leads and built quantitative models of access and go to market strategy
- Built epidemiological and risk-adjusted financial (NPV, eNPV, and revenue) models from interviews and secondary research; processing and analysing large quantities of data to inform launch strategy across European markets for a U.S. biotech's breakthrough asset
- Selected on the basis of quant skills to build L.E.K.'s multi-model global emissions-calculation system for third-party SBTi auditing (Science Based Target initiative, driving businesses to reduce emissions in line with goal of reaching net zero by 2050)

Global Research and Consulting Group Cambridge, Co-founder— Cambridge, UK | July 2020-July 2021

- Directed and organised > 45 students on 5 strategy projects with global NGOs and pro-bono institutions including Gates Foundation, Wikimedia, and The Foundation to Prevent Antibiotic Resistance

SELECT RESEARCH EXPERIENCE

MIT, Bioengineering Department, Research Assistant — Cambridge, USA | May – Sept 2025

- Proactively initiated research role under Prof. Lauffenburger to aid the use of deep learning models to progress lab research, beginning with biological limitations of current tools of data interpretation
- Researched, designed and built novel AI bioinformatics pipelines, enabling the lab to evaluate and leverage frontier deep learning architectures for their high biological data analysis whilst optimising interpretability
- Collaborated directly with lab scientists for pipeline design, its application surfacing novel insights on therapeutic targets for investigation within an active cancer program from transcriptomic data

Imperial College London, Student Research — London, UK | Sept 2024 – Sept 2025

Healthtech solution (Hospitals) : Developed backend and research paper for an LLM-powered triage system; engineered a multi-model pipeline with bias-mitigation and interpretability modules

Personalised Health & Clinical Trials platform for pregnant women : Built an AI platform leveraging wearable digital biomarkers; built synthetic data pipelines and business plans for GTM and pharma trial adoption

Climate-Tech model (Emission tracking) : Designed a novel image-model architecture for satellite-based GHG tracking with 30× performance gains over SOTA

EDUCATION

Imperial College London, AI Applications and Innovation MSc — London, UK | Sept 2024 – Sept 2025

Distinction; Thesis on building novel AI-driven bioinformatics pipelines

Modules: Python, Deep Learning, Quantum AI, Gen AI, ML for Healthcare, AI Ventures and Innovation

University of Cambridge, Natural Sciences BA — Cambridge, UK | Sept 2018 – June 2021

1st class, top 16% of cohort: David Thompson Scholar, BBS prize for comp. neuroscience thesis

Modules: Physics, Advanced Maths, Cell and Molecular Biology, Chemistry, Computational Neuroscience

EXTRACURRICULAR

Hackathons (UK & USA) :

- Regular participant in deep-tech hackathons (EF AI x Bio, Sundai Hacks); built an AI application detecting early Parkinson's via smartwatch movement and sleep data from recent publication

Art / Graphic Design (International):

- Classically trained in oil painting and life drawing (Paris, Florence, London, Boston); frequent participant in London exhibitions
- Self taught graphic designer for charities, educational platforms, festivals, and musicians; Initiated and led a major rebrand of the multimillion-pound company that has been established since 1923; Rebranded marketing was extremely successful with over 3,000 attendees, achieving c.£2m revenue
